

Evergreen//One Storage as a Service

Storage that adapts with you, backed by industry-leading SLAs

Evergreen//One™ from Everpure™ is one of the industry's most comprehensive storage-as-a-service offerings, delivering block, file, and object storage on demand. Everpure deploys, manages, and continuously upgrades the infrastructure while you pay only for what you use, all backed by binding SLAs for performance, availability, energy efficiency, and cyber recovery. The result is cloud-like agility on your estate without rebuys, downtime, or new contracts.

Consume storage as a true service

Enterprise IT leaders are under pressure to deliver cloud-like flexibility while controlling costs and absorbing unpredictable AI and data growth. Evergreen//One removes the guesswork by combining a true subscription model with infrastructure that Everpure builds, runs, and continuously improves on your behalf.

The service is backed by industry-leading SLAs and guarantees for performance, availability, energy efficiency, and cyber recovery, so the outcomes you depend on are written into the contract. New features, expanded SLAs, and platform improvements are delivered automatically as part of the subscription, ensuring your environment never falls behind.

Right-sized tiers for every workload

Evergreen//One spans the full spectrum of enterprise workloads, from latency-critical Tier 1 applications and archival workloads to throughput-oriented secondary data, with subscription tiers designed to match each one.

The Adaptive Tier provides the right blend of throughput and scale for Tier 2 workloads such as backup, archive, analytics, and media repositories that fall between high-performance and archival needs. It decouples performance from capacity so you can size each independently and avoid overprovisioning. Customers focused on storage-level data protection can simplify their data management with the Snapshot Retention package. Snapshot packages add policy-based retention add-ons with 14-, 90-, and 365-day options, removing the friction and complexity of sizing snapshot capacity separately.

For healthcare providers, Evergreen//One for Medical Imaging delivers predictable per-study pricing for picture archiving and communication system (PACS) and vendor-neutral archive (VNA) environments, helping organizations manage revenue costs while giving physicians subsecond access to clinical images.

Financial flexibility

You pay only for the storage you use, with the ability to scale as needed and reset commitments at the end of term.

Operational simplicity

Everpure deploys, runs, and upgrades infrastructure under binding SLAs, allowing your team to focus on applications.

Unified operations

On-premises and Azure Local environments are supported through a single subscription.

Elastic performance and AI-ready economics

Modern workloads, especially AI training and inference, do not consume storage on a flat curve. Evergreen//One Overdrive lets customers utilize the full performance of deployed infrastructure and pay only for usage that exceeds the SLA for their subscription, similar to on-demand reserve billing in the cloud. This delivers elastic performance without rearchitecting or renegotiating the contract.

A single subscription on premises and in the cloud

Evergreen//One now extends into the public cloud through support for FlashArray™ on Microsoft Azure Local. The same subscription covers data whether it lives on premises or in Azure, with no separate site or contract and a single operational model. This gives organizations a consistent way to balance storage consumption across on-premises and cloud environments, maximizing utilization under a single operational model without managing separate contracts or commitments.

Service overview

SLA-backed infrastructure managed by Everpure

- Pay only for the application data written, with on-demand consumption and the ability to raise your commit and reduce cost at any time.
- Get continuous upgrades, nondisruptive expansions, and zero planned downtime as part of the subscription.
- Benefit from 24x7 premium support, proactive monitoring, and a dedicated customer success manager.

Flexible commercial model

- Subscription terms that include the option to reset your commit at the end of term
- Right-sized tiers across block, file, and object storage, with even more specialized services for applications such as AI and medical imaging
- Policy-based add-ons for snapshots
- Extra performance on demand with Evergreen//One Overdrive

Storage simplified

Evergreen//One delivers storage as a true service, backed by industry-leading SLAs. With a single subscription, you get elastic capacity, nondisruptive upgrades, and built-in capacity planning without the burden of hardware lifecycle management.
