

Everpure Enterprise Data Cloud Services

Accelerate Enterprise Data Cloud adoption with confidence.

Enterprise Data Cloud (EDC) is a shift from managing storage arrays to operating a unified, policy-driven data platform across the enterprise. For large, complex organizations, this requires coordinated transformation across infrastructure, operating models, and governance.

Everpure™ Advanced Services provides the expertise and execution model to manage that transition with clarity and control. We help organizations modernize their storage estate, implement Everpure Fusion™, integrate automation and observability, and establish the governance required to operate an EDC at scale.

The customer experience

EDC Platform Transformation Services delivers a structured path from strategy to production.

We assess readiness, define workload and governance models, design target-state architectures, and execute controlled deployments across your storage environment. Migration, standardization, automation, and visibility are integrated from the start, ensuring the platform is not only implemented, but adopted and sustained.

Solution overview

Organizations pursuing EDC transformation often need to standardize governance, improve visibility, modernize infrastructure, and reduce operational complexity. Without a structured approach, these initiatives can introduce risk, inconsistent configuration, and underutilized capabilities.

Our services are organized across three integrated areas of focus.

Operational efficiency

- Reduced manual operational effort through automation
- Accelerated adoption of Everpure Fusion and policy-driven operations

Visibility and optimization

- Unified governance and visibility across distributed environments
- Continuous optimization aligned to evolving business priorities

Performance and outcomes

- Improved workload placement and performance alignment
- Reduced risk and disruption during large-scale platform transformation

Consult

We align EDC strategy to business and operating model outcomes.

This phase focuses on:

- Assessment of current environment, governance posture, and operational maturity
- Workload classification and policy definition to support a policy-driven data platform
- Design of a cloud operating model aligned to Everpure Fusion, automation, and policy-driven governance
- Application modernization alignment to ensure workloads are ready for policy-based operations
- Transformation roadmap development with phased execution and risk mitigation

The consult phase ensures clarity, executive alignment, and a structured path to adoption before technical deployment begins.

Deploy

We operationalize EDC through structured implementation and enablement.

This phase includes:

- Everpure Fusion implementation and policy enablement across the storage fleet
- Infrastructure deployment and fleet standardization
- Structured data migration and workload mobility to drive adoption
- Integration with enterprise observability and monitoring platforms
- Implementation of automation and workflow orchestration solutions
- PEAK training and hands-on enablement to embed new operational behaviors

The deploy phase establishes a secure, standardized, and policy-driven environment that is production-ready and aligned to the defined operating model.

Optimize

We ensure your EDC remains aligned, efficient, and resilient over time.

This phase includes:

- Business-Critical Services and Lifecycle Service support to sustain operational excellence
- Residency Services and technical account management for ongoing governance and advisory
- Evergreen® subscription alignment to maintain platform currency
- Data Platform Optimization Service subscriptions for continuous performance, workload mobility, and efficiency improvement

The optimize phase ensures your EDC remains continuously governed, optimized, and aligned to evolving business demands.

Why Everpure Advanced Services for EDC?

We combine platform expertise, enterprise migration capability, and operating model transformation experience to ensure your EDC delivers measurable results.

We differentiate through:

- A services-led transformation model that simplifies change
- Integrated migration, automation, and governance expertise
- Proven experience across complex enterprise environments
- A structured methodology that reduces transition risk
- Ongoing optimization that sustains adoption beyond deployment

How to engage

To begin your EDC transformation journey:

- [Contact your Everpure representative or the Services Sales Desk.](#)
- Engage with a services solution consultant to review your objectives.
- Define the right service mix based on your environment and priorities.

Everpure Advanced Services empowers you to modernize with confidence, reduce operational complexity, and unlock the full value of your EDC.
